Lyme Disease Foundation Pays $5000 in Family Lyme Expenses

The Kiwanis Club of EAST MEADOW, Long Island South Central Division – At a recent meeting of the East Meadow club, Distinguished Past Governor John Gridley gave the Hagan family nearly $5,000 to reimburse them for medical bills of son, Tom, who is suffering with Lyme disease. These funds were dispensed from the charitable Foundation’s Giving Project; Lyme Disease. The young man is the grandson of one SDPLG Tom Gallagher’s employees.

Brittany Fund for Lyme Disease, The young man is the grandson of one SDPLG Tom Gallagher’s employees.

For the past many years I have had the assignment to chair the Community Service committee for the Governors. Each article I wrote relayed different ideas that I have; hoping they might work for your club. For this article, I am departing from normal routine.

Since we have close to 300 clubs in the state and each of them provide a form of Community Service, I want you to FAX me and tell me what your club considers its “main” Community Service Project. I also want you to tell me which are the most successful in your club and neighborhood. Projects that may work upstate may not work downtown and vice versa.

I will gather your responses and pass them on in the next column. I write articles that were sold at this event and $20,000 raised from the sale. I am optimistic that I will receive some ingenious ideas, as well as, some tried and true programs that may be 20 or 30 years old. Either way, I want you to tell me about your Community Services that I can share with the Kiwanians in my next column. This will give all of our clubs a distinct advantage when I can say, “another club found this very successful and we should try it as well; there is a proven track record.”

Thanks in advance for your replies. My fax number is 516-294-1278.

Lyme Disease

SYMPTOMS OF LYME DISEASE

Erythema Migrans:

Usually, the first symptom of Lyme disease is a red rash known as erythema migrans (EM). The telltale rash starts as a small red spot at the site of the tick bite. The spot expands over a period of days or weeks, forming a circular or oval-shaped rash. Sometimes the rash resembles a bull’s eye, appearing as a red ring surrounding a clear area with a red center. The rash, which can range in size from that of a dime to the width of your back, appears within a few weeks of a tick bite and usually at the site of the bite. As infection spreads, rashes can appear at different sites on the body.

Erythema migrans is often accompanied by symptoms such as fever, headache, stiff neck, body aches, and fatigue. Although these flu-like symptoms may resemble those of common viral infections, Lyme disease symptoms tend to persist or may come and go.

Arthritis:

After several months of B. burgdorferi infection, slightly more than half of people not treated with antibiotics develop recurrent attacks of painful and swollen joints that last a few days to a few months. The arthritis can range from one joint to another. The knee is most commonly affected. About 10 to 20 percent of untreated people will go on to develop chronic (long-lasting) arthritis.

Neurologic Symptoms:

Lyme disease also can affect your nervous system, causing symptoms such as, stiff neck and severe headache (meningitis), temporary paralysis of facial muscles (Bell’s palsy), numbness, pain, or weakness in the limbs, and poor muscle movement. More subtle changes such as memory loss, difficulty concentrating, and a change in mood or sleep habits also have been associated with Lyme disease. Neurosyphilis problems usually develop several weeks, months, or even years following an untreated infection. These symptoms often last for weeks or months and may return. Less commonly, untreated people may develop other problems weeks, months, or even years after infection. These include heart problems.

Fever is 1 out of 10 people with Lyme disease develop heart problems, such as irregular heartbeat, which can start with dizziness or shortness of breath. These symptoms rarely last more than a few days or weeks. Such heart problems generally show up several weeks after infection. Less commonly, Lyme disease can result in eye inflammation, hepatitis (liver disease), and severe fatigue, although none of these problems is likely to appear without other Lyme disease symptoms being present.

North Shore Key Club Shows Support for Club Lyme Victim

The North Shore Key Club sponsored a fundraiser at North Shore High School for the Key Club District Project; Lyme Disease. A club member has just been newly diagnosed with this disease, and so they wanted to show support for a fellow Key Clubber. Pictured above right to left is the chairperson Eleni Efthathoudis with member Lexi Marshall preparing the candy canes that were sold at this event and $200.00 raised from the sale.

Long Island North Sponsors Aktion Club

The kiwanis Club of NORTH SHORE, Long Island North Division – is sponsoring a new youth service club called the Action Club. This is a very special club with the membership made up of adults with disabilities. Aktion Club members join hands and with the assistance of the kiwanis Club together they make a difference to the community.

This club will be co-sponsored by the Glen Cove and East Norwich Kiwanis Clubs, a great K Family affair in deed. An Aktion Club is the only community-service club for adults with disabilities and allows its members to develop initiative and leadership skills while enabling their integration into society.

For more information about the North Shore Kiwanis Club, the website address is: northshorekiwanis.com.
